

WHEN: Tuesday, October 3 at 5:15 pm

PURPOSE: Continue discussing software requirements

ATTENDANCE: William Hedges, Eric Loseke, Achinth Ulagapperoli

Meeting notes taken by Eric Loseke

We started the meeting 45 minutes earlier than planned. Manish is taking a physics quiz and cannot make the meeting. William Johnson is off campus.

While William Hedges drafts an email to Dr. Saedian about the extra credit quiz, Achinth and Eric are documenting the functional requirements for the project.

We used online resources and ChatGPT to give us ideas for how to structure and word different items in our software requirements specifications document.

For the functional requirements part of the document, Eric and Achinth started with the ChatGPT generated functional requirements, removing the generated sections irrelevant to the scope of the project and rewriting the sections relevant to the project to match the project description.
