WHEN: Saturday, September 30 at 1:15 pm
PURPOSE: Discuss project requirements
ATTENDANCE: Manish Singh, William Johnson, William Hedges, Eric Loseke

Meeting notes taken by Eric Loseke

This is an impromptu meeting. We decided to meet for the project after completing the extra credit quiz 1 as a group. Since Achinth could not join us for the quiz, he could not make the meeting.

We reviewed the project overview to determine what we need to include in our final code.

William Johnson and William Hedges discussed different methods to implement the different calculator functions.

Eric downloaded the software requirements specifications document from Canvas and added it to the shared Google drive.

William Johnson created a C++ file main.cpp to test getting user input.

We reviewed how to compile C++ files as a group.

We are trying to solve an equation in one go rather than building a stack.

Will Johnson started creating the code in C++ that handles simple operations (+,-,*,/). He focused on addition and subtraction in this meeting.

We figured out how to code basic addition and subtraction with C++. We will need to change the code to account for the order of operations later when we implement other operations.

We ended the meeting by discussing the code so that everyone understands how the program works.
